John Lacyk,
Patent Examiner
USPTO
Reference patent application #10627286

John,

Called this morning - left message. However, in some instances it will probably be more productive to use all communication avenues available. This is just a quick fax of a few important topics.

This "Electromagnetic Brain Animation" generator patent application has been in the loop for more than 4 years including the 'provisional' which preceded it. It's been up and published for coming on 3 years. I am aware, especially with this type of mechanism, the total process is quite long; nevertheless, we believe, even taking that into account, this time span has been 'abnormal'.

We only mention this fact due to the result being it is already comparatively well known within the 'bioengineering' field. Thus, the "workability" has been established many times over via multiple neuro scientists, clinical testing and prototype manifestations.

This is both positive and possibly negative due to the fact that what we were able to invent into a viable manifestation is now becoming known by corporate monoliths which have considerably more power of 'wealth' than a small organization such as ours. We are forced to protect our property as aggressively as is possible.

We have no doubt it is a 'seminal instrumentation' which will have an incomparable impact with the mental health arena. And in relation to that, considerable funds have been allocated toward FDA approval, corporate investment and public utilization. Therefore, we are mandated to be absolutely correct relating to the 'template' requirements and specific understandable accuracy as to the process and methodology.

We have been pouring over your corrective requirements as to why all 31 of the claim have been rejected as they are now...and we believe we understand the necessary instructions. I have contacted you approximately 12 times over the past three years and thus, it is extremely important that you remain our primary examiner for the remainder of the process. any variation would be quite unproductive. You are talented, informative and always helpful.

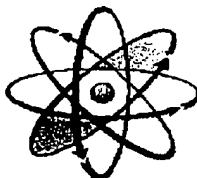

Numerous medical entities have been on 'alert' for some time now as to when they can step forward at almost literally the day full allowance is given by USPTO. Therefore, we will do everything within our power to expedite toward the 'finish line' as expeditiously as is humanly possible.

We will contact you again with any and all questions and at the time we believe the claims have been corrected - which should be quite soon. In the meantime, please reach out to us in whatever communication form is most convenient to you. All possibilities are enclosed.
